

## HySpecIQ LLC

### Private Remote Sensing System License Summary of HySpec -1 & 2

On February 6, 2015 the National Environmental Satellite, Data and Information Service of the National Oceanic and Atmospheric Administration (“NOAA”), an agency of the Department of Commerce, granted a license to HySpecIQ LLC to operate a private, commercial, space-based remote sensing system named HySpec-1 and HySpec-2.

The license granted by NOAA permits HySpecIQ LLC to operate a low earth orbit, electro-optical hyperspectral and Panchromatic imaging system which is capable of collecting, for commercial distribution, panchromatic data at a spatial resolution no better than 1.0 meters and hyperspectral data at no better than 5.0 meters.

The HySpec-1&2 License permits the satellites to sun synchronous orbit Earth at 450 km – 700 km altitudes between 97.21° – 98.19° inclination.
