

GeoEye Solutions Inc.
(a wholly-owned subsidiary of DigitalGlobe, Inc.)

**Private Remote Sensing System License Summary of
IKONOS**

On January 10, 2006 the National Environmental Satellite, Data and Information Service of the National Oceanic and Atmospheric Administration, and agency of the Department of Commerce, granted a license to ORBIMAGE SI Opco Inc. d/b/a/ GeoEye to operate a private, commercial, space-based, remote sensing system named IKONOS. On May 14, 2010 the IKONOS license was updated in connection with the corporate name change of ORBIMAGE SI Opco Inc. to GeoEye Solutions Inc. On January 31, 2013 DigitalGlobe, Inc. completed its acquisition GeoEye, Inc. and its subsidiaries.

The IKONOS satellite, whose name is derived from the Greek word for image, was the world's first commercial satellite able to collect black-and-white (panchromatic) images with 1-meter resolution and multispectral imagery with 4-meter resolution. Imagery from both sensors can be merged to create 1-meter color imagery (pan-sharpened). IKONOS orbits Earth in a sun synchronous orbit at an altitude of 680 km at 98 degrees inclination.
